

EPICS AND USER STORIES

Issue	Summary	Description / User Story	Parent
SCRUM-10	Manage Parking Spaces	As a Parking Administrator, I want to add, update, and view parking spaces by location, space number, parking type, availability, and rental price, so that I can maintain accurate and up-to-date parking space information.	Parking Space Management
SCRUM-11	View Available Parking Spaces	As a Vehicle Owner, I want to view available parking spaces along with their location, type, and rental price, so that I can select a suitable parking space for my vehicle.	Parking Space Management
SCRUM-12	Create Parking Reservation	As a Vehicle Owner, I want to reserve an available parking space by selecting the required date and duration, so that I can secure a parking space in advance.	Parking Reservation System
SCRUM-13	Manage Parking Reservations	As a Parking Administrator, I want to view, update, and cancel parking reservations, so that I can manage parking space bookings efficiently.	Parking Reservation System
SCRUM-14	Register Vehicle	As a Vehicle Owner, I want to register my vehicle with its registration number, type, model, and owner details, so that my vehicle can be associated with my parking reservation.	Vehicle Registration Management
SCRUM-15	Verify Vehicle Details	As a Parking Warden, I want to search and verify vehicle details using the registration number, so that I can confirm whether a vehicle is authorized to use the parking facility.	Vehicle Registration Management
SCRUM-16	Validate Driving License	As a Parking Warden, I want to validate a vehicle owner's driving license and registration details, so that only authorized and legally valid vehicles can use the parking facility.	License & Compliance Validation

SCRUM-17	Identify Expired Licenses	As a Parking Warden, I want to identify expired or invalid driving licenses, so that vehicles with invalid documentation can be prevented from accessing the parking facility.	License & Compliance Validation
SCRUM-18	Record Parking Entry	As a Parking Warden, I want to record vehicle entry details including vehicle number, parking space, and entry time, so that vehicle access can be monitored accurately.	Parking Access Control
SCRUM-19	Record Parking Exit	As a Parking Warden, I want to record vehicle exit time, so that the system can maintain accurate parking session and occupancy records.	Parking Access Control
SCRUM-20	Process Parking Payment	As a Vehicle Owner, I want to view and pay the parking rental fee, so that I can complete my parking reservation and use the allocated parking space.	Parking Payment Management
SCRUM-21	Track Parking Transactions	As a Parking Administrator, I want to view parking payment and transaction records, so that I can monitor collected fees and outstanding payments.	Parking Payment Management
SCRUM-22	Monitor Parking Occupancy	As a Parking Administrator, I want to view currently occupied and available parking spaces, so that I can monitor parking capacity and manage space utilization efficiently.	Parking Analytics & Monitoring
SCRUM-23	Generate Parking Reports	As a Parking Administrator, I want to generate reports on parking reservations, occupancy, payments, and vehicle usage, so that I can analyze parking operations and make informed decisions.	Parking Analytics & Monitoring

Burndown Chart and Sprint Progress

Summary

VIVA

1. Did your estimations reflect the actual effort?

Yes, overall the estimations were fairly accurate. The smaller tasks, such as viewing parking spaces and registering vehicles, were easier to complete, while more complex tasks, such as license validation and managing parking reservations, required more effort. Using story points helped us estimate the difficulty of each task before starting the sprint.

2. Was your backlog well-prioritized?

Yes, I think the backlog was well-prioritized. We gave higher priority to important features such as managing parking spaces, creating reservations, validating driving licenses, and recording vehicle entry and exit. These features directly support the main functionality of the smart parking system, while reporting and analytics could be handled after the core operations were established.

3. How did your simulated sprint align with your plan?

The simulated sprint followed our plan quite well. We started with the user stories in the To Do column and moved them to In Progress and Done as the work was completed. This helped us understand how tasks are managed during a Scrum sprint and allowed us to track the progress of the smart parking system step by step.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart gave us a clear idea of how much work was completed and how much work was remaining throughout the sprint. It showed the reduction in story points as the team completed the assigned user stories. This helped us understand our team's capacity and determine whether the planned workload could realistically be completed within the sprint.
